To calculate power in single phase power you just multiply the amps times the volts. In three phase it is amps times volts times the square root of 3 (about 1.732). Power conversion equipment. Power conversion equipment can take the 400Hz input and create 60Hz AC (frequency conversion), DC (transformer-rectifier).

When I pass 120v "shore power" through it, I get the proper 120v reading between my load and ground wires. But when I remove shore power and invert off my batteries, the readings go to 60v between load and ground, 60v between neutral and ground, and 120v between load and neutral.
