Amps x volts = watts so your "600" watt power supply is only making 300 watts on the 12v rail. This is the most important part and where almost all the power is drawn from. If that was a quality power supply it would be labeled as 350 watts at most. A very good power supply would call that a 300w unit. Don't trust it as more than a 300w power ...
