The small size and the low weight of the inverter show the benefits on system level that can be achieved by the application of SiC devices in the power range of 10kW in a MNPC UPS inverter. UPS as application has been chosen because it is a growing market and well suited to demonstrate the advantages of SiC devices.

It consists of a thyristor (SCR) rectifier, an IGBT inverter, a bypass, and a power frequency boost isolation transformer. Because its rectifier and transformer work at a frequency of 50Hz, it is called a power frequency inverter. High frequency machine is usually composed of IGBT high frequency rectifier, battery converter, inverter and bypass.
