

Apia Container Generator

How to run OpenAPI-Generator locally?

If you prefer to run the service locally, here are the steps: The online openapi-generator can be run via Docker as well. For example, to generate Ruby API client, simply send the following HTTP request using curl: `:8080/api/gen/clients/ruby` Then you will receive a JSON response with the URL to download the zipped code.

What is OpenAPI-Generator-online Docker?

The openapi-generator-online Docker image can act as a self-hosted web application and API for generating code. This container can be incorporated into a CI pipeline, and requires at least two HTTP requests and some docker orchestration to access generated code. Example usage: `--header 'Accept: application/json' \`

How do I create a Dev container in VS Code or Daytona?

Create a `.devcontainer/devcontainer.json` file in the root of your repository. Open your repository in VS Code or Daytona and it will automatically run your dev container. Now you're ready to develop inside your consistent and isolated dev environment! Imagine a world where any software, any code, just runs. No more complex setups.

Does Dev container generator work with GitHub repositories?

Currently, our dev container generator only works with public GitHub repositories. This ensures that we can analyze the necessary metadata without requiring additional authentication or permissions. Ready to Simplify Your Development Environment?

How do I create a Dev container?

Paste your GitHub URL and get a custom devcontainer.json to simplify your development. Follow these steps: Create a `.devcontainer/devcontainer.json` file in the root of your repository. Open your repository in VS Code or Daytona and it will automatically run your dev container.
