An electrical double layer capacitor/Supercapacitor is nothing but a high-capacity capacitor with capacitance values much higher than normal capacitors but lower voltage limits. Supercapacitors store charge electrostatically (non-Faradaic) by reversible adsorption of the electrolyte onto electrochemically stable high surface area carbon electrodes.

Nano powder supercapacitor structure graphene battery can deliver a substantial amount of power in a short period. This high power density is particularly beneficial in applications requiring bursts of energy, such as electric vehicles, power tools, and renewable energy systems. The ability to provide quick, intense power boosts can enhance the ...
