Contact us for UPS Engineer Support or Advice.

Online uninterruptible power supplies use a combination of rectifier and inverter to supply power to the AC load in normal operation. During a power failure, power is supplied with the support of an inverter. Conversely, an offline system supplies power from the AC mains to the load. An online system's output power supply stays on.

Therefore, often a UPS and EPS are used in combination, if an uninterruptible power supply is also necessary over several days. It has to be noted, that applications with very high safety demand may also keep the generator warm 24/7, or even running all the time (which is an awful waste of energy).

An uninterruptible power supply (UPS) can keep things running smoothly no matter what life throws at you. These are an investment in productivity and peace of mind. How does an uninterruptible power supply work, though? These systems bridge the gap between power failures and system reliability. They instantly supply backup energy while ...

What is a UPS (Uninterruptible Power Supply)? A UPS is designed to provide immediate power backup in case of an electrical outage or disruption. It contains an internal battery system that takes over the power supply to the connected devices, ensuring they remain operational for a certain period after the primary power source has failed. ...
