But if you care about keeping your devices safe and making eco-friendly choices, understanding these power converters is absolutely worth it.. Whether you're setting up an off-grid solar system, powering an RV adventure, or just ensuring your home backup system runs ...

An inverter is a critical part of any Solar Energy system. When the solar panels do their magic to convert all that lovely daylight into electricity, they produce DC power which then needs to be converted to AC for use in your home via an inverter. Nowadays the only country we can find that still uses DC power is Argentina.

These cheap portable inverters are designed to be floating (no ground), and must remain floating, or will be damaged. You are reading 60v to ground, because they are floating. This is normal. You can connect a GFCI to them, but it may not function as any protection. Just keep it and everything it's powering, ungrounded. And everything will be fine.
