

Double glass sun room

Is double-paned glass suitable for a sunroom?

For a homeowner in a mild climate, double-paned glass may be sufficient to keep a sunroom comfortable. However, tinted glass, which has many of the heat-reducing benefits of Low-E coating, also dims the light that comes into the sunroom. This can be beneficial in sunrooms where people plan to watch television, as it reduces glare.

What type of glass is used to build a sunroom?

A truly insulated sunroom is built using double-pane glass. Never single pane glass. Between the layers of glass is usually an inert gas such as Argon, which provides a barrier to insulate the room from outside temperatures.

What is the cheapest glass for a sunroom?

This is the cheapest glass available to use for a sunroom. Although it is not generally advisable to use these, the panels are quick to install and cheap to replace. Single pane glass would be ideal as a stopgap measure while deciding on a stronger and more durable glass type to use.

Should you build a sunroom with floor-to-ceiling glass?

A sunroom with floor-to-ceiling glass, also called a solarium, can maximize your view of the outdoors. This type of sunroom has wall-to-wall glass as well as a glass roof. Whether it's the right choice for you depends on where you choose to build your sunroom and the type of glass that makes the most sense for your project.

What is the insulation method used in sunroom glass?

A truly insulated sunroom is built using double-pane glass- never single pane glass. Between the layers of glass is usually an inert gas such as Argon, which provides a barrier to insulate the room from outside temperatures.

What to consider before choosing sunroom window glass?

Before choosing your sunroom window glass, consider how quality glass can increase your home's value. Sunrooms are typically made up of 75-90% framed glass, so the glass you choose is crucial. Consider the manufacturing and treatment of the sunroom glass to avoid potential issues.
