There are mainly three types of solar inverters -- string inverters, micro-inverters, and power optimizers. All these inverters have a different system. However, they have the same function, which is collecting DC power from batteries and convert into AC, though with different levels of efficiency.

Lithium-ion batteries are now widely used and have revolutionized energy storage, particularly for inverters. They have gained popularity in recent years for their efficiency and reliability. Lithium-ion batteries have transformed the way we store energy, making them ...

which function as a DC coupling solution, battery inverters operate as an AC coupling solution.

This variant is only permitted for PV systems of up to 4.6 kilovolt-amperes (kVA). Three-phase battery inverters are mandatory for larger systems in excess of 4.6 kVA. If you want to use an inverter with a battery to feed power into the utility grid or with a secure power supply function, then an SMA three-phase battery inverter is ideal.
