What is an emergency inverter system?

An emergency inverter system is a set of DC batteries and electronics that can convert DC power from the batteries into an AC power source needed for emergency lighting loads. It will provide enough emergency AC power for the required time to exit the building if necessary.

What is an emergency lighting inverter?

An emergency lighting inverter converts DC battery power to standard AC voltages to provide backup for lighting systems in an emergency. They are commonly used with fire alarm systems, emergency lighting, exit lighting, and lighting control systems, among other critical or life safety-related equipment.

What is a lighting inverter?

A lighting inverter is a device that converts DC battery power to standard AC voltages to provide backup for lighting systems in an emergency. It can also help protect against 'brownouts' or other voltage drops. What is an emergency lighting inverter? It provides power to your emergency lamps and fixtures in a power loss.

What is an emergency lighting backup inverter?

An emergency lighting backup inverter is a device that converts DC battery power to standard AC voltages to provide backup for various lighting systems, including fluorescent and LED lights, in an emergency.

How do I use an inverter for emergency power?

A very simple way to use an inverter for emergency power (such as during a power outage), is to use a car battery (with the vehicle running), and an extension cord running into the house, where you can then plug in electrical appliances. More Questions? ([Back to FAQ](#))
