How do I choose a portable power station?

Put together a list of the devices you want to power with a portable power station. Laptops, phones, and small appliances will require less power than larger appliances like refrigerators or heaters. Consider both essential and non-essential items you might want to power in various scenarios.

What is an outdoor Uninterruptible Power Supply?

An outdoor Uninterruptible Power Supply is a power solution designed for critical applications where it's essential that equipment stays running in harsh outdoor environments and significant temperature variations, where an ordinary UPS would fail. Trust TSi Power for these applications.

Why should you choose a portable power station?

A portable power station with a higher capacity will be able to store more energy and therefore power devices for a longer period of time. This number stipulates the maximum number of watts the power station can generate for one hour. For example, a 1,000-watt power station will charge a device that requires 1,000 watts for one hour.

What is the output wattage of a portable power station?

The output wattage of the portable power station refers to the maximum amount of power the power station can output at any given time. It's essential to ensure that the output wattage is greater than the highest wattage of any device you plan to power.

What type of outlet does a power station have?

AC Output: This is the standard household outlet type. Most power stations have at least one AC outlet. DC Output: Often used for car accessories or specific devices. USB Ports: For charging phones, tablets, and other small devices. USB-C Ports: Increasingly common for faster charging of compatible devices.
