Think of it like a computer's power supply; if the wattage is lower than what the computer needs, you're out of luck. You can find out how much power your PC (or other equipment) uses with a wattmeter, which can be purchased online for about \$15. Remember to check the consumption of everything that you need to power.

But with a solar panel that can produce 300-500 Wh on a good day, a 1000 Wh power station should be sufficient as long as there is good weather! Since high-capacity power stations are often quite heavy, solar panels can give you a lot of flexibility and save costs by enabling you to bring a smaller power station and be more energy independent.

Power Supply: Powered USB hubs come with their own AC adapters and can run on an external power source. They do not take any power from your laptop. While unpowered USB hubs take all the power from your laptop or PC. **Power Output:** Every single USB port of a powered USB hub operates at a max power output of 2.5 watts.
