The electric shift transforming the vehicle industry has now reached the mobile power industry. Today's mobile storage options make complete electrification achievable and cost-competitive. Just like electric vehicles, mobile storage is driving the transition beyond diesel dependence and toward emissions-free, grid-connected sustainability.

The PCM can be charged by running a heat pump cycle in reverse when the EV battery is charged by an external power source. Besides PCM, TCM-based TES can reach a higher energy storage density and achieve longer energy storage duration, which is expected to provide both heating and cooling for EVs [[80], [81], [82], [83]].
