What is an ASM battery system?

An ASM battery system can be formed with a parallel connection of battery packs which contains a flexible number of series connections of battery stacks where each stack represents a parallel connection of battery cells. Whether or not a clustering of modules is respected, depends on the architecture of so-called cell-supervision-circuits.

What is ASM multicell battery?

The tried-and-tested ASM multicell battery model assists you in the early phases of controller development and in the validation of control units. You can use it to complete component tests or simulate the performance of a battery system in any type of application.

What are the three parts of battery pack manufacturing process?

Battery Module: Manufacturing, Assembly and Test Process Flow. In the Previous article, we saw the first three parts of the Battery Pack Manufacturing process: Electrode Manufacturing, Cell Assembly, Cell Finishing. Article Link In this article, we will look at the Module Production part.

How many modules are in a car battery pack?

The battery pack consists of ten modules, divided in two rows and two levels. The lower modules contain 30 cells, and the upper modules contain 24 cells.

How are battery modules distributed in a battery pack?

The battery modules are already modularised in the way that the same type is used throughout the pack. The module frame consists of one frame with equally distributed gaps for the battery module connections.

How can the length of a battery pack be modified?

The battery pack has a rectangular shape where its length can be modified, depending on the capacity needed. The battery housing will be modularised in a way that three lengths of plate exist, to create a larger space for packs needing additional modules.
