

# Portable power supply appearance

What is a portable power supply?

A portable power supply is a large-capacity power supply that can store electric energy in portable power stations. These portable power stations are ideal for use inside or outside your home during outdoor activities for a consistent energy supply. A portable power station has different outputs and can be charged in multiple ways.

What should I know before using a portable power supply?

Before using a portable power supply, follow specific instructions given by the manufacturer. These may include ensuring it is fully charged before use, using appropriate outlets and ports, etc. While you emphasize the usage of a portable power station, maintaining it is equally important.

What is outdoor large-capacity portable power supply?

Due to its small size, large capacity, and mobility, the outdoor large-capacity portable power supply is equivalent to a large-scale portable charging treasure for people who work outdoors. It can be used in emergency rescue, emergency power supply, backup power supply, and other use scenarios.

What is a large capacity portable power supply?

The outdoor large-capacity portable power supply has a power output of 220V/500W/1000W/1500W/2000W/3000W, but a large power means larger capacity support, and a large capacity means excellent quality. Take the capacity battery 6000Wh as an example, the basic weight is close to 45KG, which is no longer "portable".

What are the pros and cons of a portable power supply?

But there are some pros and cons of a portable power supply that you must be aware of: Portability: Portability is one of the most significant advantages of portable power stations. Composed of lithium batteries, these are lightweight and easy to carry. You can use them on your road trip, sporting events, next outdoor adventure, camping, and more.

How do I choose the right size portable power station?

To select the right size of portable power stations, you should determine what devices you want to power and for how long. For example, a Jackery Explorer 3000 Pro Portable Power Station can charge a gaming computer (200W) and a laptop (80W),  $\text{Working Time} = \text{Capacity in Wh} \times 0.85 / \text{Operating wattage of the appliances}$ .
