

Solar ridge tiles

What are solar roof tiles?

Just like solar panels, solar roof tiles convert sunlight into electricity, but they're made to look just like traditional roof tiles. Some models are actual roof tiles with integrated solar cells.

Are solar roof tiles as efficient as solar panels?

As solar roof tiles are a more niche product, available in different variations to match your roof, and installing them means re-tiling your roof, they are more expensive to buy and install than solar panels. But are they as efficient as regular solar panels? That depends.

How much do solar roof tiles cost?

An average of 3.5 kW solar roof tile system will cost you £9,500. Information last updated in March 2025. By contrast, on average, 3.5kW worth of solar panels will set you back £7,026. But remember, you are also getting a new roof with your solar tiles, so direct price comparison is slightly misleading.

How do solar power tiles work?

Our patented solar power tiles provide electricity for your home or business, whilst blending in seamlessly with your roof. Each roof integrated tile provides emission-free electricity to offset rising energy bills and reduce your carbon footprint.

What are ridge & hip tiles?

Ridge and hip tiles create the perfect finish on any roof. Available in concrete, clay and fibre cement, we have a range of designs available so you can fully customise your roof. We also stock a variety of ridge and hip tile fixings, perfect for DIY projects.

What is a solar roof?

Solar Roof is comprised of both glass solar tiles and steel roofing tiles. Glass solar tiles produce energy, while architectural-grade steel tiles add longevity and corrosion resistance to your roof. Both are durable, strong and engineered for all-weather protection.
