How many ft containers are suitable for explosion-safe storage?

In Summary: Choose from 10 ft or 20 ft containers for explosion-safe storage suitable for offshore. Personalize your unit to meet your exact storage needs. Explore options and get a tailored quote to fit your specific situation. We recognize the unique challenges of storing hazardous goods, particularly in the offshore sector.

What makes a container explosion-proof?

Containers for explosion-proof zones feature specially designed internal and external components that are blast-resistant, which promotes greater safety during shipping. The focus is on ensuring that parts that come in direct contact with the cargo are built to resist explosions, which significantly reduces the risk.

Which industries need explosion-proof containers?

Other industries requiring explosion-proof containers can include chemical processing and general manufacturing. In these and other applications, protecting workers without compromising productivity is key. However, any environment in which a high explosive threat is present can benefit from Klinge Corporation products.

Are ATEX offshore storage units reliable?

Choose from 10 or 20 ft models, with reliable features by Cobex and Ex-Machinery. For those in need of dependable storage solutions for hazardous materials on offshore sites, the ATEX Offshore Storage Units present a practical and secure option. Made by Netherlands-based manufacturer VMCR Solutions.

Why do oil and gas companies need ATEX-compliant containers?

The oil and gas industry is one of the largest markets for ATEX-compliant containers. The dangerous conditions encountered when working offshore or in pipeline operations make clear the need for strict regulations and effective equipment.

Are explosion-proof reefer units a good investment?

Explosion-proof reefer units can also provide substantial cost savings for your company. A blast could ruin an entire shipment, which means you will have to bear the expense of replacing it (although insurance could offset some of the cost in some cases).

The positive pressure explosion-proof container operates by utilizing the container shell to meet technical standards for explosion-proofing. This allows the installation of regular non-explosion-proof machinery and electrical equipment within the container while ensuring safety.

Industrial equipment operating in hazardous environments, where flammable or explosive materials are present, require specialized equipment to prevent accidents and ensure safety. One of the most important safety measures is the use of explosion-proof containers designed to prevent equipment from being exposed to flammable and explosive environments.

The positive pressure ventilation system is the key to making the container explosion-proof. When the total power supply is turned on, firstly the system automatically turns on the explosion-proof blast system. The explosion-proof centrifugal fan extracts fresh air from 30 meters outside the danger zone into the positive pressure container.
