

Tiled solar equipment

Can solar panels be installed on a tiled roof?

Installing solar panels on roofs is a popular choice for several reasons: low chances of shade from nearby objects, ample space that serves no other purpose, and closeness to your home. How are solar panels fixed to a tiled roof? Solar panels are mounted on a system of rails and roof hooks. The rails float above the roof tiles.

Can solar panels be installed on a roof in Australia?

Solar panels can be installed on many roof types and the most common type in Australia are tiled roofs. The tiles are removed and stainless steel brackets are screwed to the rafters and the tiles then re-installed in the former position. The railing systems are mounted on the steel brackets leaving a clear space between the roof and the panel.

How does a solar panel mounting system work?

This allows for air circulation to get between solar panels and tiles and for the air circulation to cool the solar panels in the hot summer months. The solar panel mounting system uses the rails and brackets to tie the solar power system to the roof frame.

How do solar panels work?

Solar panels are mounted on a system of rails and roof hooks. The rails float above the roof tiles. This floating effect is essential, as touching the tiles risks damage from heavy snow or severe wind, which can cause the solar panels to rattle and shake. Additionally, the air circulation underneath the panels helps cool them off.

How are solar panels installed?

Roof rails ready for the installation of solar panels. Solar panels are clipped to the rails with a different clip. There are fewer variations here; ultimately, they all have some part that goes into the rail and another that sits on top of one or two panels. The two parts are fastened with a bolt. Again, no special tools are required.
