While it is a large UPS, it can handle the same load in as little as two-thirds of the footprint, leaving the remaining third be allocated to revenue-generating equipment. The 2000 kVA 9900D also has up to a 40% higher power density than other UPS, maximizing power output while minimizing gray space for a more efficient UPS.

Deciding whether it's worth repairing an existing system or if you should purchase new UPS equipment depends on several factors. Most likely, if your system is over 15-years old, repairing the components will cost more than what the system is worth. Similarly, components in UPS systems have changed over time. Systems currently on the market ...
